Great Lakes affect Detroit climate.

Detroit vacation rentals enable you to experience Detroit’s temperate climate and 4 well-defined seasons. The Detroit climate is greatly influenced by the Great Lakes. The condensation of water vapor from the Great Lakes causes frequent cloud coverage over Detroit. Winters are cold with moderate snowfall and summers are warm and sunny. Summers usually run from May to September and are a wonderful time of the year to appreciate the activities on and around the Detroit River. Winter’s chills will provide you time to appreciate the wide variety of museums in the cool winter months.

Detroit has unique geographic attributes.

Detroit has the only international wildlife preserve in North America that is located in the heart of a major metropolitan area. The preserve includes islands, coastal wetlands,

marshes, and shoals along 48 miles of the Detroit River. The city slopes gently on a plain composed of clay. Detroit geographical location is north of its sister-city, Windsor, Ontario, and it is the only city in the United States where you need to travel south to reach Canada. Both Detroit and Windsor sit atop the Detroit Moraine, a broad clay ridge which rises approximately 62 feet above the Detroit River.
